DSP LC13B webinar
01 December 2023 - 14:30 – 15:30

Presenters

- Presenters – **Mike Hewitt, Richard Vernon, Ben Farn, Allan Aitchison, Jane Wharam**

Q&A from the webinar

Q	**The timescales look challenging for contract award both SI and DSP core. Do DCC agree that the timescales are challenging?**
A	Our current timescales have been based on historic procurement best practice assumptions and early market engagement. The timelines were presented to the market for consideration in our live Consultation and based on stakeholder response, DCC will update timelines.

Q	**It's a challenge to get testing done according to the dates within the Consultation. What do you intend to test – would this timeline be an issue for that testing?**
	The current timeline is indicative and will be subject to change following the award to the successful delivery partner(s) and the proposed DSP solution. The testing dates will be subject to review by the DSP System Integrator and the Testing Advisory Group (TAG) before next being baselined.

Q	**Will Certificate changes be needed to migrate from old to new DSP?**
A	Certificate management proposals will be developed during 2024 to mitigate the risk of stranded devices across any elements of the DCC ecosystem to ensure that during all and any future technology refresh we do not strand any active or non-installed devices - a key migration strategy will be agreed with the Security Sub-Committee (SSC).
